Bellevue, Washington ♦ supriyaparvatham116@gmail.com ♦ [LinkedIn](#)

EDUCATION

Masters in Computer Science, Georgia State University, GPA: 3.9/4.0

Jan 2022 - Dec 2023

Bachelors in Computer Science, K L University, GPA: 4.0/4.0

June 2016 - May 2020

SKILLS

Dev Tools VS Code, GitHub, Pega PRPC, Anaconda, Android Studio, Eclipse, Jupyter Notebook

Databases/Cloud MongoDB, MySQL, Firebase, Basex, Neo4j, SQL Server, AWS, Azure, GCP

Languages Python, JavaScript, Java, HTML, CSS, C, XML, JSON, GraphQL, Swift

Data/Analytics Pandas, NumPy, Matplotlib, Scikit-learn, PowerBI, Airflow, SSIS, SSMS, Redshift, Athena, BigQuery

EXPERIENCE

Software Development Engineer I, Amazon (EC2 Spark Team)

Nov 2025 - Present

- Migrated software usage reporting workflows from **Redshift** to **AWS Glue** with data stored and processed via **S3**, enabling scalable and maintainable pipelines.
- Built end-to-end data pipelines (planning, design, implementation, testing) for multi-vendor software usage tracking across Microsoft (SQL Standard, Enterprise, Web), SUSE, RedHat, and Ubuntu Pro.
- Converting partner-team reporting workflows into **Python-based AWS Lambda** functions, using **S3** for data ingestion and output, reducing duplicate logic and standardizing reporting pipelines.
- Developed and maintained workflows using **Step Functions**, **Glue**, and **Athena** to support analytics and reporting.
- Fixed and stabilized integration tests for the Lightswitch application, improving test reliability and deployment confidence.

Data Engineer, UPS

Jan 2024 - Nov 2025

- Led end-to-end software development from requirement gathering and architecture to implementation and support; built CI/CD pipelines using **GitHub** and onboarded on-prem applications using **Taurus**.
- Designed and optimized complex **T-SQL** queries and stored procedures in **SSMS** for analytics and reporting.
- Created reusable **SSIS** templates with parameterized configurations for scalable ETL architecture.
- Configured release pipelines in **Azure DevOps** to automate deployment of SSIS packages and database scripts.
- Developed **PowerBI** dashboards to visualize key metrics and trends for stakeholders.
- Leveraged **GCP** services such as **BigQuery** and Cloud Storage for cloud-based data processing workflows.

Graduate Teaching Assistant, Georgia State University

Jan 2022 - Dec 2023

- Guided 200+ students in Computer Organization and Data Structures; developed and graded assignments, labs, and exams.
- Conducted weekly office hours to clarify coursework and support problem solving.

Associate Business Analyst, Infosys

May 2019 - Jan 2022

- Designed, implemented, and optimized database solutions using **MySQL** and **Neo4j** to support business needs.
- Built and optimized SQL queries with strong understanding of relational database systems for efficient data retrieval.
- Automated workflows using **Python**, improving efficiency and reducing manual effort.
- Managed infrastructure and system administration tasks to ensure reliability and minimize downtime.
- Developed and maintained web applications using **PHP**, **JavaScript**, **CSS**, and APIs, improving project efficiency by 30%.
- Contributed to AWS deployments using **EC2**, **S3**, and **RDS** for scalable cloud environments.

PROJECTS

- **Weather Forecasting Using Machine Learning** Applied ML models on data from 35 cities using parameters like temperature, humidity, and wind; evaluated 6 models and fine-tuned **XGBoost** with SMOTE, achieving 66% accuracy.
- **DonorsChoose Application Screening** Built classification models using KNN, Naive Bayes, and Linear Regression to automate project eligibility evaluation.
